| Address | 437-21, Oncheon-ro, Paltan-myeon, Hwaseong-si, Gyeonggi-do, Korea | | |
| major business | Natural antibacterial materials, food/food additives, health functional food ingredients | | |

We develop innovative products by applying materials extracted from natural ingredients to various industries. By using 'Highly Activated Calcium' which is from natural shells without any chemical treatment and 'Liquid Complex Activated Mineral' extracted from more than 20 kinds of minerals contained in weathered granite, it is applied to various fields such as health functional foods/antibacterial agents/food additives/fertilizers.

Products

Renovera Calcium Powder

Use Fruit&Veggie Cleaner

Description It cleanses fruits and vegetables, by the effect of sterilization and chemical removal function of highly activated calcium

Actical FOD

Use Food Additives/antimicrobial agent

Description it is used to increase the shelf life by directly adding it into food. and it is added to plastic&silicon to produce products with excellent antibacterial function

Eco Mineral 23

Use Mineral Fertilizer

Description It contains 23 different minerals to promote photosynthesis of plants and greatly increase yields

Technical Capacity

» Highly Activated Calcium

Quick absorption/excellent antibacterial effect

It promotes calcium absorption and applies to antimicrobial industrial materials

» Complex Active Mineral

Liquid mineral from natural rocks

Organic matter removal/promotion of photosynthesis/water quality improvement by the action of more than 20 minerals
