

RealTek Co., Ltd

CEO	Lee Mu Nam	Phone	+82 42-362-1006
E-mail	account@h-realtek.com		
Address	#215,160 Techno 2-ro, Yuseong-gu, Daejeon		
major business	Vacuum system/Residual gas analysis system/Helium leakage detection system/Pump repair/Pump parts		

RealTek is a company specializing in Vacuum Total Solution and provides high-quality services such as vacuum production/inspection/gas monitoring/leak inspection. As the industry develops, production processes and experimental facilities are diversified, and vacuum-based products are needed more. We provide optimal vacuum solutions based on these industries and RNDs, handle vacuum pumps/gauge/systems, helium leak detection systems/residual gas mass spectrometry systems, and implement highly technical projects such as development, production, sales and repair.

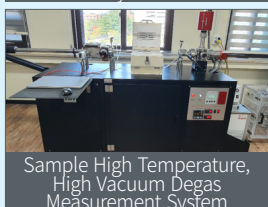

Products

Use System for checking the confidentiality of various products
Description Provide an ideal solution for short cycle time and mass production

Use Atmospheric Pressure Gas Analysis, Catalyst Study, Exhaust Gas Analysis, Low Vacuum Gas Analysis, Gas Manufacturing Process, Moisture and de-gas analysis, environmental evaluation, real-time toxic gas analysis
Description Precision quantitative gas analysis system(captured gas and trace components can be analyzed)

Use Measurement of degassing characteristics of ultra-vacuum and super-vacuum materials, in semiconductor process, which is a major problem during process
Description Quantitative Analysis System of Fine Deodorant Using Residual Gas Analyzer in Vacuum Condition

Technical Capacity

» Vacuum Total Solution

Total solution technology that can create vacuums, check vacuums, monitor vacuum process gases, and even check vacuum leaks
Implement a vacuum pump, vacuum gauge, vacuum system, helium leak detection system, residual gas mass spectrometry system, with the aim of providing an optimal vacuum solution
